NOTIFICATION DATE		DELIVERY MODE		
03/15/2011		ELECTRONIC		

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

sughrue@sughrue.com
PPROCESSING@SUGHRUE.COM
USPTO@SUGHRUE.COM

Office Action Summary	Application No. 10/576,756	Applicant(s) SHIGESADA ET AL.
	Examiner SHANTA G. DOE	Art Unit 1774

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) Responsive to communication(s) filed on 16 December 2010.
- 2a) This action is FINAL. 2b) This action is non-final.
- 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) Claim(s) 1,2, and 5-23 is/are pending in the application.
 - 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) Claim(s) 1,2 and 5-17 is/are allowed.
- 6) Claim(s) 18-21 is/are rejected.
- 7) Claim(s) 22 and 23 is/are objected to.
- 8) Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) The specification is objected to by the Examiner.
- 10) The drawing(s) filed on 21 April 2006 is/are: a) accepted or b) objected to by the Examiner.
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
 - a) All b) Some * c) None of:
 1. Certified copies of the priority documents have been received.
 2. Certified copies of the priority documents have been received in Application No. _____.
 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) Notice of References Cited (PTO-892)
- 2) Notice of Draftsperson's Patent Drawing Review (PTO-946)
- 3) Information Disclosure Statements(s) (PTO/SB/08)
 Paper No(s)/Mail Date 03/08/2011
- 4) Interview Summary (PTO-413)
 Paper No(s)/Mail Date _____
- 5) Notice of Informal Patent Application
- 6) Other: _____

DETAILED ACTION

Response to Arguments

1. Applicant's arguments filed 12/16/2010 have been fully considered but they are not persuasive. The applicant's argument stating that the obviousness rejection (35 U.S.C. 103) of claim 18 is unsupported because the examiner has not explained how the thickness of a part of forming the second opening of the discharge part is a results effective variable was not found persuasive. The above argument was not found persuasive because even though the examiner did not explicitly explain how the thickness of discharge part is a result effective variable, the examiner is of the belief that one of ordinary skill in the art would have known that changing the thickness of the opening of the discharge part would affect the size and shape of the material dispensed from the opening. Hence, it would have been obvious to one having ordinary skill in the art at the time of the invention to have the thickness of the part forming the second opening of the discharge part be 0.2mm or more, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involve only routine skill in the art.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 1774

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

3. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148

USPQ 459 (1966), that are applied for establishing a background for determining

obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
 2. Ascertaining the differences between the prior art and the claims at issue.
 3. Resolving the level of ordinary skill in the pertinent art.
 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
5. Claims 18-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Moring et al (US 6,159,368).

Regarding claim 18, Moring discloses a cartridge (1) for nucleic acid separation and purification comprising a cylindrical body with a first opening (top open end of 12) and a second opening (bottom opening of 12) (see fig. 3 & 6) and having a nucleic acid-

Art Unit: 1774

adsorptive porous membrane(8a) held in the cylindrical body, in which separation and purification of nucleic acid are conducted by passing a sample solution containing nucleic acid by pressurized gas from the first opening to the second opening to allow the nucleic acid to be adsorbed to the nucleic acid-adsorptive porous membrane, wherein: the cylindrical body comprises: a cylindrical main body having a bottom part supporting the nucleic acid-adsorptive porous membrane (see fig 3 &6); and a discharge part (16)(see fig 6) connecting the bottom part opening formed in the bottom part and the second opening (see entire document especially fig. 3 , 6 and col. 4 lines 12- 15,47-49, 65-col. 5 line 5; col. 6 lines 15-20, col. 12 lines 6-7; col. 15- col. 17). Moring fails to specifically disclose the thickness of the part forming the second opening of the discharge part.

However, it would have been obvious to one having ordinary skill in the art at the time of the invention to have the thickness of the part forming the second opening of the discharge part be 0.2mm or more, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involve only routine skill in the art.

Regarding claim 19, Moring discloses the cartridge for nucleic acid separation and purification according to claim 18. Moring fails to specifically disclose that a diameter of the second opening is 1.0 mm or more, and an outer diameter of the part forming the second opening is 1.4 mm or more.

However, it would have been obvious to one having ordinary skill in the art at the time of the invention to have the diameter of the second opening be 1.0 mm or more and the outer diameter be 1.4 mm or more, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involve only routine skill in the art.

Regarding claim 20, Moring discloses the cartridge for nucleic acid separation and purification according to claim 18, wherein an angle (α) formed by an end face of the discharge part and an outer wall surface of the discharge part is 105° or less (see fig 6 and col. 3 lines 58-60).

Regarding claim 21, Moring discloses the cartridge for nucleic acid separation and purification according to claim 18, wherein an end face of the discharge part is in a shape of a funnel with a portion closer to the second opening having a larger opening diameter (see fig 3 and col. 3).

Allowable Subject Matter

1. Claims 1, 2, 5-11 and 12-17 are allowed.

Regarding claim 1 and its dependent claims the prior art alone/in combination fails to disclose a cartridge for nucleic acid separation and purification comprising cylindrical

main body formed of cylindrical part and a bottom part having an opening and a nucleic acid-adsorptive porous membrane comprising a rim part whereby the rim part is compressed so that voids in the rim part of the membrane disappear.

Regarding claim 6 and its dependent claims, the prior art alone or in combination fails to disclose a method for producing a cartridge for nucleic acid separation and purification: the method comprising a step of placing the nucleic acid absorptive porous membrane on the bottom part provided in the bottom member and placing the bottom member and the membrane in a cavity of an injection molding die; a step of pressing a core pin to the membrane while holding the membrane with a rim part of the membrane protruding from the periphery of an end face of the core pin and closing the injection molding die; a step of injecting a molding material into the cavity forming the cylindrical part of the cylindrical main body and at the same time sandwiching and holding the rim part of the membrane between the molding material and the bottom part and step of removing a casting from the injection molding die.

Regarding 12-17, the prior art fails to disclose the cartridge having a protrusion where in the top part of each protrusion slopes down to the discharged part in a radial direction of the bottom part.

2. Claims 22 and 23 are objected to as being dependent upon a rejected base claim (claim 18), but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Regarding claim 22, the prior art fails to disclose the device of claim 18 wherein resin hydrophilicity of an end face and an outer wall surface of the discharge part is enhanced.

Regarding claim 23, the prior art fails to disclose the cartridge for nucleic acid separation and purification according to claim 18, wherein at least one lug member for guiding bubbles is provided on an end face of the discharge part.

Conclusion

3. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to SHANTA G. DOE whose telephone number is (571)270-3152. The examiner can normally be reached on Mon-Fri 8am-5pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Walter Griffin can be reached on 571-272-1447. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
